REMARKS

Claims 1, 8, and 11 have been amended. Claim 20 is cancelled. New claims 21 and 22 have been added.

The examiner rejected claims 1-8, 10-16, and 20 under 35 USC § 102(b) as being anticipated by Hahn (2002/0127120). Hahn describes a microprocessor controller capable of storing information for further use at a later time (Paragraphs 8 and 9 and claim 9). The claimed invention utilizes wireless communication with a memory unit for storing and reading information related to (among other things) the operating conditions of a compressor and its components. Since Hahn does not describe a system or method utilizing wireless communications, all of Applicant's claims which were rejected under USC § 102(b) as being anticipated by Hahn are in condition for allowance.

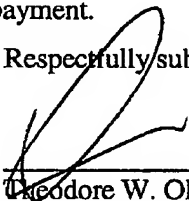

The examiner rejected claims 9 and 17-19 under 35 USC § 103(a) as being unpatentable over Hahn in view of Blotenberg (6,269,299). Blotenberg describes a system control with remote adjustment capabilities and a method of operating the same. Blotenberg is essentially a system control. It does not disclose anything mounted to the compressor. Thus, there is no incentive to combine Blotenberg and Hahn, nor would their combination create the present device.

Applicant respectfully submits this case is in condition for allowance. If the Examiner believes that a telephone conference will facilitate moving this case forward to being issued, Applicant's representative is happy to discuss any issues regarding this application and can be contacted at the telephone number indicated below.
